

CHATGPT AND BASIC AI TOOLS

Atene, 3rd – 8th June 2024

Tibor Brvar

In early June, I attended an exceptional course in Athens focused on ChatGPT and the basics of artificial intelligence. Over the course of five insightful days, we explored various aspects of AI.

On day one, we discussed moral dilemmas related to AI, sparking thought-provoking debates. Day two centered around the functions of ChatGPT and Co-pilot, helping us understand how these tools can improve our work. On day three, we delved into AI image generators and presentation tools, learning to craft effective prompts for future projects. Day four focused on AI in education, where we explored tools like Magic School and Actionbound to enhance teaching. Finally, on day five, we studied Perplexity and different GPT models, gaining insights into how they can support research and analysis.

The week concluded with a cultural day exploring Athens' rich history and enjoying its local cuisine.

This experience was truly unforgettable, and I'm excited to share what I've learned with my colleagues.
